

GameCult Repo Swarm Organ Atlas

A categorized hierarchy of the current organ swarm

Epiphany is the harness. VoidBot is the live precursor. CultLib is the nervous system. Eve lowers daemon-owned CultUI surfaces. Odin sees every Verse. Weksa gives intent language. AquaSynth gives language a body and a voice.

Prime Shape

GameCult is a repo swarm, not a product list. The useful question is not “which repository is exciting this week?” The useful question is which organ owns which truth, what typed state it emits, and which neighboring organs become more capable because it exists.

Grounding Standard

This atlas is grounded in repo-local READMEs, AGENTS notes, architecture docs, package metadata, and generated site/workflow files where those surfaces exist. Claims that only describe a plausible synergy are written as target paths, not as completed integration. If a future edit cannot name the source repo and surface behind a claim, it should either be cut or explicitly marked as design intent.

Swarm reading: The coherent machine is a loop: agents act through Epiphany and VoidBot; state persists through CultCache and travels through CultNet and CultMesh; Odin discovers the Verse; Eve lowers provider-owned interfaces; Weksa and AquaSynth make culture speak; games, worlds, creator tools, and public sites keep the whole system honest by making it touch people.

Top-Level Organ Hierarchy

Category	Primary organs	What the category owns
Core harness and Persona agents	Epiphany, VoidBot, Ghostlight, EpiphanyAquarium	Agent work, persistent Persona state, social memory, visual self-modeling, room-native retrieval.
Substrate and mesh	CultLib, CultCache ports, CultNet ports, CultMesh, CultMath	Typed state, cache files, protocol contracts, cross-runtime networking, math support.
Verse sight and stewardship	Odin, Gjallar, Idunn, Heimdall, Bifrost	Discovery, schema awareness, composite sight, daemon lifecycle, consent, identity, crossings, receipts.
Interfaces and lowering	Eve, Fensalir, Sai, gamecult-site, GameCult-Quartz, gamecult-grav	CultUI lowering, native and web surfaces, static-site Ink embeds, portable Eve visual-novel projection, public projection, shared site publishing.
Language and voice	Weksa, AquaSynth, aquasynths	Ontology-aware utterance lowering, vocal morphology, procedural voice and instrumental synthesis.
Media and creator tools	Mimir, StreamPixels, repixelizer, Bokusho, LunaMosaic, Spotiverse, Stonks	Room intelligence, stream interactivity, pixel tools, brush and mosaic experiments, market data, queue-aware music control, creator-facing utilities.
Games and worlds	CultPong, Aetheria, AetheriaLore, Zyphos / Eusocial Interbeing, Luxidland, Aquarium-Engine	Playable proofs, world pressure, lore, eusocial culture, open-world sharding, deterministic simulation, fractal-domain rendering pressure, language-engine pressure, runtime tests.

Graph, geometry, and inspection	Norn, norn-rs, epiphany-graph-rs, Perlines, VibeGeometry, vg-csg, _vg_csg_history_full	Graph layout, evidence maps, line and geometry tools, shape reasoning, historical CSG evidence.
Operations and inventory	gamecult-ops, repo-doc-tree artifacts	Runbooks, deployment memory, indexed repo inventory, operational truth that keeps the swarm from gaslighting itself.

Core Harness and Persona Agents

Epiphany

Role: core harness. Epiphany is the repo and agent work body where models are expected to understand the machine they touch. It pressures work through body maps, authority maps, persistent memory, and verification instead of letting every task become a confident little cliff dive.

- Owns: agent harness behavior, work execution posture, Persona-state schema pressure, verification discipline.
- Feeds: VoidBot, repo Faces, Ghostlight, the public Persona system, and any future worker that needs memory with spine.
- Needs: CultCache for durable state, CultNet and CultMesh for typed crossings, Eve for inspection surfaces.

VoidBot

Role: running precursor. VoidBot is the Discord-native proving ground for Persona agents with persistent state. It searches archives, indexed repos, and lore, speaks through room surfaces, and hands deeper work off to heavier tools when the room needs more than chat.

- Owns: Discord-native retrieval, room memory, repo source search, owner notification compatibility, live Persona pressure.
- Feeds: Epiphany's design lessons, Ghostlight social continuity, Bifrost crossing patterns, repo-Face state.
- Demotion line: delivery mechanisms are actuators, not sovereign truth. Bifrost should own public and owner-facing crossings when those crossings become formal.

Ghostlight and EpiphanyAquarium

Ghostlight carries persistent social state for characters, agents, and Faces. EpiphanyAquarium, EpiphanyAquarium-Bevy, EpiphanyAquarium-Web, and Aquarium-Engine are the visual and runtime labs for agent ecology, self-modeling, and character surfaces.

- Ghostlight owns social continuity and character state pressure.
- EpiphanyAquarium owns the aquarium metaphor made inspectable: visible agent ecology, not hidden prompt soup.
- The Bevy and Web bodies prove that the same agent ecology can be lowered into different runtimes.

Substrate, Protocol, and Mesh

CultLib, CultCache, CultNet, and CultMesh

CultLib is the nervous system family. Its job is to make state, protocol, and cross-runtime behavior boring enough that the exciting layers stop using local folklore as infrastructure.

- **CultCache** persists typed state in cache files. It is the durable memory substrate.
- **CultNet** carries typed communication between peers and services.
- **CultMesh** networks daemons, state catalogs, discovery, schema surfaces, and provider-owned interfaces.
- **CultLib** is the reference family and shared runtime pressure that keeps the ports aligned.

Organ	Runtime family	Job
CultLib	C# anchor	Shared runtime and protocol family, including schema, persistence, and interop pressure.
CultCacheTS	TypeScript	Web and Node-side typed cache body.
cultcache-rs	Rust	Rust typed cache crate for daemon and performance-sensitive bodies.
cultcache-py	Python	Control-plane and bootstrap cache body.
CultNetTS	TypeScript	TypeScript CultNet client and contract surface.
cultnet-rs	Rust	Rust peer and schema-aware transport body.
CultMath	Shared math	Math support for geometry, simulation, layout, and reasoning organs.

Verse Sight, Keepalive, Identity, and Crossings

Odin, Gjallar, and Idunn

Odin is the all-seer. It accepts Verse discovery, schema catalogs, translation routes, provider surfaces, and observation projections. It preserves provider ownership: Odin sees truth that other daemons deliberately publish; it does not replace those daemons with a secret central registry.

- **Odin** owns accepted Verse sight, schema awareness, translation planning, and interface aggregation.
- **Gjallar** presents a composite of Odin's sight. It owns overview composition, not provider truth and not terminal glyph rendering.
- **Idunn** keeps the daemons alive. It reads Odin's accepted map, watches health, performs restart intent, and escalates operator-needed failures through the right crossing.

Heimdall and Bifrost

Heimdall owns identity, grants, claims, consent, revocation, and gatekeeping boundaries. Bifrost owns crossings: patronage, work records, receipts, motions, operator notifications, and owner/public routes where an action must become accountable typed state.

- Heimdall protects who may act.
- Bifrost records why the action is legitimate, who requested it, what happened, and where the receipt lives.
- Odin may see these surfaces, Eve may lower them, but neither becomes their owner.

Interfaces, CultUI, and Public Projection

Eve

Eve is daemon dashboard lowering. A daemon publishes an Eve UI DSL composition, also called CultUI. Eve lowers that composition into GUI, TUI, browser, native, overlay, or future room surfaces.

Swarm reading: The renderer does not become truth because it has pixels. The daemon owns the interface composition. Eve lowers it. Odin discovers it. Gjallar may summarize it. That authority split is the difference between a dashboard and a little state monarchy with a nice font.

Fensalir, Sai, and the Site Stack

Organ	Job
Fensalir	Native and high-performance runtime body for local surfaces and future mesh-native tools.
Sai	Static-site Ink embedder for interactive fiction and visual-novel surfaces; ships an Eve projection module that turns Sai VN state into ‘gamecult.eve.surface.v1’ for portable renderers.
gamecult-site	Public root site: projects, docs, blog, studio pitch, and published atlas.
GameCult-Quartz	Shared Quartz engine and Pages workflow used by ‘gamecult-site’, ‘AetheriaLore’, and ‘Mimir’ site overlays.
gamecult-grav	Legacy site and publication body whose surviving lessons feed the current stack.

Language, Voice, and Alien Culture

Weksa

Weksa is the language engine. It lowers utterance intent through arbitrary linguistic, cultural, and personal ontologies into words. The important part is not vocabulary generation. The important part is that meaning passes through a culture and a speaker model before it becomes language.

AquaSynth

AquaSynth is the voice, both instrumental and tracheal. It can take Weksa’s utterance embeddings and realize them through arbitrary vocal morphologies. aquasynth-rs is the lower-level Rust body for pushing the sound machinery closer to daemon and runtime use.

Combined Capability

Together Weksa and AquaSynth let GameCult create alien languages embedded in their native cultures and then hear those languages spoken by bodies that do not need to be human. The pipeline is:

1. Culture and speaker state constrain intent.
2. Weksa lowers intent through ontology and grammar.
3. AquaSynth maps the utterance into a vocal morphology.
4. Eve, Sai, games, streams, or worlds present the result to people.

Media, Streams, and Creator Tools

Organ	Category	Job
Mimir	Room intelligence	Media observation, creator production surfaces, room signals, and stream-adjacent intelligence.
StreamPixels	Stream platform	Interactive overlays, real-time controls, and audience participation as stateful surfaces.
repixelizer	Hosted visual tool	Fun service wedge for pixel workflows and visual transformation.
Bokusho	Brush and visual lab	Drawing, brush, and expression experiments that can feed public creator surfaces.
LunaMosaic	Mosaic and visual lab	Large visual corpus and mosaic-style experiments.
Spotiverse	Spotify Verse adapter	Spotify playback, device, queue, search, and add-to-queue command boundary for the CultMesh Verse; agents use commands and do not receive raw token custody.
Stonks	CultMesh market adapter	Market-data adapter daemon: polls public endpoints, normalizes CultCache-backed market state, and publishes provider-owned Eve/CultUI surfaces for Odin/renderers.
Luxidland	Open-world simulation pressure	Unity open-world prototype with deterministic simulation, geographic world-cell sharding, route overlays, proximity clusters, quorum/witness logic, and CultMesh contract shapes.

Games, Worlds, and Story Pressure

Organ	Category	Job
CultPong	Playable proof	Small game proving governed patronage and public play can share the same machinery.
Aetheria	World body	Large setting and game-world pressure vessel.
AetheriaLore	Lore memory	Canonical and archival world memory for Aetheria.
Zyphos / Eusocial Interbeing	Culture and renderer pressure vessel	Zyphos vault/site identity inside ‘Eusocial Interbeing’; docs pressure Aquarium/Fensalir rendering and raise Weksa naming/domain-language questions.
Aquarium-Engine	Runtime support	Game and simulation engine pressure from the aquarium side of the swarm.

The worlds matter because they impose consequences. A service diagram can lie beautifully. A game

has to answer to players, timing, emotion, UI, memory, and the glorious indignity of people clicking things in the wrong order.

Graph, Geometry, and Inspection

Organ	Job
Norn	Graph loom for work, evidence, architecture, and readable relationship maps.
norn-rs	Rust body for Norn graph and layout work.
epiphany-graph-rs	Graph extraction and visualization support for Epiphany-shaped evidence.
Perlines	Line and path experiment body.
VibeGeometry	Inspectable shape and transformation tooling.
vg-csg	Constructive solid geometry experiment body.
_vg_csg_history_full	Historical CSG evidence archive, useful as memory rather than live authority.

Operations and Publication

Organ	Job
gamecult-ops	Inventory, runbooks, deployment memory, server notes, and operational decisions.
repo-doc-tree artifacts	Generated inventory that lets the site and Sai compound see what repos exist and what documents they expose.
docs and portfolio dossier	TeX, PDF, figures, pitch structure, and project arguments that make the swarm discussable.

Cross-Project Synergy Map

Synergy	Result
Epiphany + VoidBot + Ghostlight	Agent work becomes persistent, room-aware, socially legible, and verifiable instead of disposable chat foam.
CultLib + CultCache + CultNet + CultMesh	Every runtime can persist state, communicate, discover schemas, and publish surfaces without smuggling in local JSON doctrine.
Odin + Gjallar + Idunn	The swarm can know what exists, show the operator a composite view, and keep services alive after failure.
Heimdall + Bifrost	Consent, identity, claims, work, patronage, notifications, and receipts become inspectable crossings.
Eve + Odin + daemon providers	Provider-owned UI compositions can be discovered and lowered into many runtimes without moving truth into the renderer.

Sai + gamecult-site GameCult-Quartz	+	The public face can explain the same machine through pages, durable docs, static-site Ink visual novels, and a shared engine used across the GameCult static-site fleet.
Sai + Eve		Sai already ships an Eve projection module, so Ink-powered story state can be represented as portable ‘gamecult.eve.surface.v1’ instead of only browser DOM.
Weksa + AquaSynth		Intent becomes culture-shaped language, then body-shaped speech. This is the alien-language engine with teeth.
Mimir + StreamPixels		Room intelligence can feed stream overlays and interactive media surfaces in real time.
repixelizer + Bokusho + LunaMosaic + VibeGeometry		Creator-friendly visual tools become service wedges and reusable visual capability.
Aetheria + Zyphos/Eusocial Interbeing + CultPong		Worlds and games test the architecture against play, story, culture, Weksa language pressure, Fensalir fractal-domain rendering pressure, and public use.
Luxidland + CultMesh		Open-world sharding, deterministic simulation frames, route/cell/vehicle facts, proximity clusters, and quorum/witness logic give CultMesh MMO-shaped pressure. VibeGeometry/Fensalir nested-detail and LOD remain the renderer synergy path until wired source says more.
Norn + epiphany-graph-rs Eve	+	Evidence and architecture can become spatial maps and then inspectable surfaces.

Canonical Current Repo Swarm

This list names the current public repo-doc tree organs represented by the site-side inventory. Temporary agent snapshot indexes and duplicated check workspaces are not treated as sovereign organs; they are evidence trails unless promoted into an explicit owner.

Repo identity	Organ reading
Aetheria	World body and game setting pressure vessel.
AetheriaLore	Lore memory and canonical setting archive.
Aquarium-Engine	Runtime support for aquarium-style simulation and game bodies.
AquaSynth	Voice, instrumental synthesis, and vocal morphology research.
aquasynth-rs	Rust voice body and lower-level synthesis path.
Bifrost	Work, patronage, receipts, notifications, and public or owner crossings.
bokusho	Brush and expression lab.
CultCacheTS	TypeScript typed cache body.
cultcache-rs	Rust typed cache body.
cultcache-py	Python typed cache body.
CultLib	Shared runtime and protocol anchor.
CultMath	Math support organ.
CultNetTS	TypeScript CultNet client body.
cultnet-rs	Rust CultNet peer body.
EpiphanyAgent	Core harness and Persona-state pressure.

EpiphanyAquarium	Agent ecology and visual self-modeling lab.
EpiphanyAquarium-Bevy	Bevy runtime body for the aquarium.
EpiphanyAquarium-Web	Web runtime body for the aquarium.
Eusocial Interbeing	Zyphos vault/site identity and alien eusocial design; docs pressure Aquarium/Fensalir rendering and raise Weksa domain-language questions.
Eve	CultUI lowering and daemon dashboard surface system.
Fensalir	Native or high-performance runtime body.
gamecult-grav	Legacy publishing body and migration memory.
gamecult-ops	Operations inventory, runbooks, and deployment memory.
GameCult-Quartz	Shared Quartz engine and Pages workflow used by ‘gamecult-site’, ‘AetheriaLore’, and ‘Mimir’ site overlays.
gamecult-site	Public root site and repo atlas.
Ghostlight	Persistent social state for characters, Faces, and communities.
Heimdall	Identity, grants, consent, claims, and revocation.
LunaMosaic	Visual mosaic corpus and experiment body.
Luxidland	Unity open-world prototype with deterministic simulation, world-cell sharding, proximity clusters, quorum/witness logic, and CultMesh contract shapes; renderer LOD synergy remains a target path, not a confirmed integration.
Mimir	Room intelligence and creator production surfaces.
Norn	Graph loom and readable relationship maps.
norn-rs	Rust graph and layout body.
Odin	All-seer for Verse discovery, schema awareness, translation, and interface aggregation.
Perlines	Line and path experiment body.
repixelizer	Hosted pixel and visual transformation service.
Sai	Static-site Ink embedder and visual-novel surface with an Eve projection module for portable ‘gamecult.eve.surface.v1’ output.
Spotiverse	Spotify adapter daemon for the Verse: playback/queue/device polling, search, and ‘add-to-queue’ through a command boundary and receipts.
Stonks	Market-data adapter daemon for the CultMesh Verse: public end-point polling, normalized market snapshots, request events, and provider-owned Eve/CultUI surface.
StreamPixels	Stream interactivity platform.
vg-csg	Constructive solid geometry experiment body.
VibeGeometry	Inspectable shape and transformation tooling.
VoidBot	Discord-native Persona precursor and retrieval runtime.
weksa	Ontology-aware language engine.
_vg_csg_history_full	CSG historical evidence archive.

Design Rule

Each organ should be defended in one sentence:

X owns Y so that Z remains true.

If the sentence sounds false, awkward, or suspiciously padded, the organ is not yet coherent. Fold it into the right owner, split the hidden responsibility, or cut the dead authority. The swarm does not need more little thrones. It needs clean nerves.
